GREEN T.HE

cast resin Transformers

With the application in July 2015 of the European Commission Regulation for ecodesign, **efficiency standards of transformers will be more strenght**

The Green T.HE Transformers comply with the EN 50588-1 Standard. They are designed and manufactured according to the Regulation 548/2014 of European Commission and the new Ecodesign guidelines 2009/125/CE.

Legrand Green T.HE Transformers, designed and manufactured in accordance with new Regulation, ensure a consistent reduction in energy consumption, resulting in economic savings and the decrease of CO₂ emissions released into the atmosphere.

The EN 50588-1 Standard

applies to 50 Hz, 5 kVA to 40 MVA three-phase dry-type distribution transformers with maximum voltage per component not exceeding 36 kV.

548/2014 Regulation

sets out the requirements (mandatory) on ecodesign requirements for electric transformers with a minimum power rating of 1 kVA used in electricity transmission and distribution networks.

CLASSIFICATION

The classification of a cast resin transformer depends on the value of the no-load losses (P_0), as well as the load losses (P_k).

More precisely, P_0 losses are independent from the load and remain constant for the whole period the transformer is connected to the electric power network. On the other hand, P_k losses only occur when the transformer is connected to a load and they are proportional to the square of the load.

NO-LOAD LOSSES (P_0)	LOAD LOSSES (P_k)
A_0	A_k
A_0	B_k

The transformer purchase price is only a small part of its Total Ownership Cost (TCO), while the Operating Costs (mainly connected with losses), represent over 80% of the TCO. Buying a transformer designed according to rules environmentally friendly, means reducing the Operating Cost and, consequently, having both an economic and environmental advantage.

Once the transformer has exhausted its own operating cycle, all of the materials can be easily recycled or disposed, as indicated in the PEP (Product Environmental Profile) document.

Said document describes the environmental impact of a product during its entire life cycle (from extraction of the needed raw materials to product disposal).

ECODESIGN REQUIREMENTS				
Rated power (kVA)	STEP 1 (from 1 July 2015)		STEP 2 (from 1 July 2021)	
	Maximum load losses P_k (W)	Maximum no-load losses P_0 (W)	Maximum load losses P_k (W)	Maximum no-load losses P_0 (W)
≤ 50	B_k (1700)	A_0 (200)	A_k (1500)	$A_0 - 10\%$ (180)
100	B_k (2050)	A_0 (280)	A_k (1800)	$A_0 - 10\%$ (252)
160	B_k (2900)	A_0 (400)	A_k (2600)	$A_0 - 10\%$ (360)
250	B_k (3800)	A_0 (520)	A_k (3400)	$A_0 - 10\%$ (468)
400	B_k (5500)	A_0 (750)	A_k (4500)	$A_0 - 10\%$ (675)
630	B_k (7600)	A_0 (1100)	A_k (7100)	$A_0 - 10\%$ (990)
800	A_k (8000)	A_0 (1300)	A_k (8000)	$A_0 - 10\%$ (1170)
1000	A_k (9000)	A_0 (1550)	A_k (9000)	$A_0 - 10\%$ (1395)
1250	A_k (11000)	A_0 (1800)	A_k (11000)	$A_0 - 10\%$ (1620)
1600	A_k (13000)	A_0 (2200)	A_k (13000)	$A_0 - 10\%$ (1980)
2000	A_k (16000)	A_0 (2600)	A_k (16000)	$A_0 - 10\%$ (2340)
2500	A_k (19000)	A_0 (3100)	A_k (19000)	$A_0 - 10\%$ (2790)
3150	A_k (22000)	A_0 (3800)	A_k (22000)	$A_0 - 10\%$ (3420)

Requirements applicable (losses value) to three phase dry type transformers with rated power ≤ 3150 kVA with one winding with U_m ≤ 24 kV and the other one with U_m ≤ 1,1 kV.

ADVANTAGES OF Green T.H.E TRANSFORMERS

Low,
partial
discharges,
HIGH Quality

According to the product standard related to design of resin transformers (CEI EN 60076-11, i.e. IEC 60076-11), all the windings with a voltage $\geq 3.6\text{kV}$ should be subjected to the measurement of the **partial discharges and the value measured should not exceed 10 picocoulombs (pC)**.

Partial discharges are a microscopic phenomena occurring inside insulating resin cavities and can speed up ageing.

For this reason, it is important that the values of such currents are limited.

A low value of partial discharges gives an indication of the positive factors, such as:

- a solid design criteria has been applied
- a high quality of raw materials used
- a high precision during the conductor winding phases
- a high competence during the epoxy resin pouring around the high-voltage winding
- a high impregnation coefficient of low voltage coil
- a rigour in final assembling of semi-manufacturers

It is easy to see a coloration between a lower level of partial discharges that leads to a higher resistance to work stresses and consequently to a higher life expectancy of the transformer under examination.

TYPE OF THE PARTIAL DISCHARGES

Depending on the type, discharges can be divided into:

- **Corona effect:** is the discharge that happen in air or in a gas surrounding a conductor, this usually occurs in relation to points and edges present on the conductors.
- **Surface discharges:** it occurs on the surface of an insulator and which generally causes damage on the surface of the insulation itself, reducing the efficiency
- **Internal discharges:** represents the main cause of life-cycle decrease of the insulating material]
- **Treeing** (branched discharge channel): is the channel of pre-discharge which is formed following the degradation of the insulation and which leads to a destructive discharge.

Reliability guaranteed

With Green T.HE series, Legrand provides customers a top-quality product which guarantees long-term excellent performance and reliability.

When the Green T.HE transformers are subjected to partial discharges (according to CEI 60076-11, i.e. IEC 60076-11), values under **5 pC** have been always been achieved (which exceeds the requirement of the standard which establishes the maximum value at 10 pC).

Thanks to the excellent quality of products, Legrand has extended its GUARANTEE to 8 YEARS for all its transformers with standard features (*).

Green T.HE series is certified by ACAE and it is the only one tested on the market and certified by a third party organisation.

(*) standard features:
 all transformers according to the European Directive 548/2014 and with the code starting with "F", such as FK4AAAGBA Green T.HE-eu AA
 KVA 1000 kV 20/0,4.
 All the transformer accessories shown on pages 14 and 15 of this catalogue are expressly excluded from the guarantee extension.

CERTIFIED QUALITY

Certifications

The Legrand test lab "IB03" has recently received the qualification by ACAE to work according to the 17025 standard on all routine tests and on some tests for medium-voltage transformers.

Such acknowledgement and qualification is a very important plus obtained and Legrand with few others around the world can offer this to their customers.

Every cast resin transformer is tested before the delivery to the customer.

ACCEPTANCE TESTS

■ Measurement of winding resistance	IEC 60076-11 (clause 15)
■ Measurement of voltage ratio and check of phase displacement	IEC 60076-11 (clause 16)
■ Measurement of short-circuit impedance and load loss	IEC 60076-11 (clause 17)
■ Measurement of no-load loss and current	IEC 60076-11 (clause 18)
■ Separate-source AC withstand voltage test	IEC 60076-11 (clause 19)
■ Induced AC withstand voltage test	IEC 60076-11 (clause 20)
■ Partial discharge measurement	IEC 60076-11 (clause 22)

TYPE TESTS (on request)

■ Lightning impulse test	IEC 60076-11 (clause 21)
■ Temperature-rise test	IEC 60076-11 (clause 23)

SPECIAL TESTS (on request)

■ Measurement of sound level	IEC 60076-11 (clause 24)
■ Short-circuit test	IEC 60076-11 (clause 25)

Resin Green T.HE

Compliance with standard: IEC 60076-11 and EN 50588-1
 Power (kVA): 100–3150
 Frequency (Hz): 50
 Adjustment, MT side: $\pm 2 \times 2.5\%$
 Thermal class of the insulating system: 155 °C (F) / 155 °C (F)
 Temperature rise: 100/100 K
 Class of use: E2-C2-F1 Certified CESI A9032391 IEC 60076-11
 Tolerances on losses: 0%
 Other tolerances: According to IEC/CEI

Primary voltages (kV): 6-10-11. Insulation class: 12 kV BIL 60 kV
 (BIL 75 kV available on request at no extra charge,
 to be specified at the time of order)
 Secondary voltages no-load (V): 400-433 (insulation class 1.1 kV)

Primary voltages (kV): 12-13,2-15. Insulation class: 17,5 kV BIL 75 kV
 (BIL 95 kV available on request at no extra charge,
 to be specified at the time of order)

Secondary voltages no-load (V): 400-410-420 (insulation class 1.1 kV)
 Primary voltages (kV): 20-23. Insulation class: 24 kV BIL 95 kV
 (BIL 125 kV available on request at no extra charge,
 to be specified at the time of order)
 Secondary voltages no-load (V): 400-410-420 (insulation class 1.1 kV)

Primary voltages (kV): 25-33. Insulation class: 36 kV BIL 170 kV
 Secondary voltages no-load (V): 400-420 (insulation class 1.1 kV)

Values are for reference only. Construction drawings must be used for design.
 Data provided may be modified without warning for reasons of technical production or product improvement.

Possibility to build (on request) products with other combinations of primary and secondary voltage.

Cat. Nos.	Ventilation bars		
	The ventilation busbars temporarily increase the rated power (under normal service conditions). According to standard IEC 60076-1, a transformer is called AN even if it is equipped with discontinuous ventilation. If a transformer with AF continuous service is requested, it is not possible to refer to the codes included in this catalogue, but the transformer will be designed according to the customer's needs.		
	Range (kVA)	ΔPower (%)	Notes
CB02444	100 - 250	+ 40	A temporary increase in rated conditions
CB02454	315 - 800	+ 40	
CB02464	1000 - 1250	+ 40	
CB01414	1600 - 2500	+ 30	
CB01412	3150	+ 20	

Cat. Nos.	Surge arrester kit	
	Vn (kV)	
130075D	6	
130054D	10-11	
130055D	15	
130056D	20	

Cat. Nos.	Rubber supports (anti vibration)	
	Range (kVA)	Description
170019	≤1600	4 buffers supplied for mounting under the transformer casters
170020	≥2000	4 buffers supplied for mounting under the transformer casters

Temperature measurement probes					
Probes are supplied mounted on to the transformer and wired to aluminium IP 66 junction box.					
	Type	Range (kVA)	N°	Δt (°C)	Installation
200073	Pt100	≤2000	3	-	on the LV (3) windings
200074	Pt100	≥2500	3	-	on the LV (3) windings
200137	Pt100	≤2000	3+1	-	on the LV (3) windings + on the core (1)
200138	Pt100	≥2500	3+1	-	on the LV (3) windings + on the core (1)
CB0012	PTC	-	3+3	130-140	on the LV (3 pairs) windings for alarm and release.
CB0240	PTC	-	3+3	110-120	on the LV (3 pairs) windings for alarm and release.
CB0272	PTC	-	3+3+3	110-130 -140	on the LV (3 pairs) windings for fan control, for alarm and release.

Cupal plates		
Cupal is a bimetal sheet made up of one copper sheet and one aluminium sheet inseparably welded together through a special mechanical procedure.		
	Range (kVA)	Description
030014 *	≤ 160	40 x 40 CUPAL plate
030008 *	≥ 200 and ≤ 315	50 x 50 CUPAL plate
030009 *	≥ 400 and ≤ 630	60 x 60 CUPAL plate
030010 *	800	80 x 80 CUPAL plate
030011 *	1000	100 x 100 CUPAL plate
030012 *	≥ 1250	120 x 120 CUPAL plate

Note: * the codes refer to a single CUPAL plate

Example:
 - Power = 1250 kVA corresponds to the CUPAL plate code item 030012
 - Quantity calculation: 2 plates x 4 BT terminals = 8 CUPAL plates

Temperature control devices		
Central units are supplied unassembled		
	Type	Description
220035	VRT200	fan control
220002	T154	temperature control for 4 Pt100 probes
220023	MT200L	temperature control for 4 Pt100 probes
220010	T119 DIN	temperature control for 6 PTC probes, preset for DIN rail mounting
220004	T 119	temperature control for 6 PTC probes
220174	AT100	fan control
220197	NT935	temperature control for 4 Pt100 probe with analogue and digital output

Green T.HE cast resin transformers

231127*	8	31	3100	2000	3000	750	

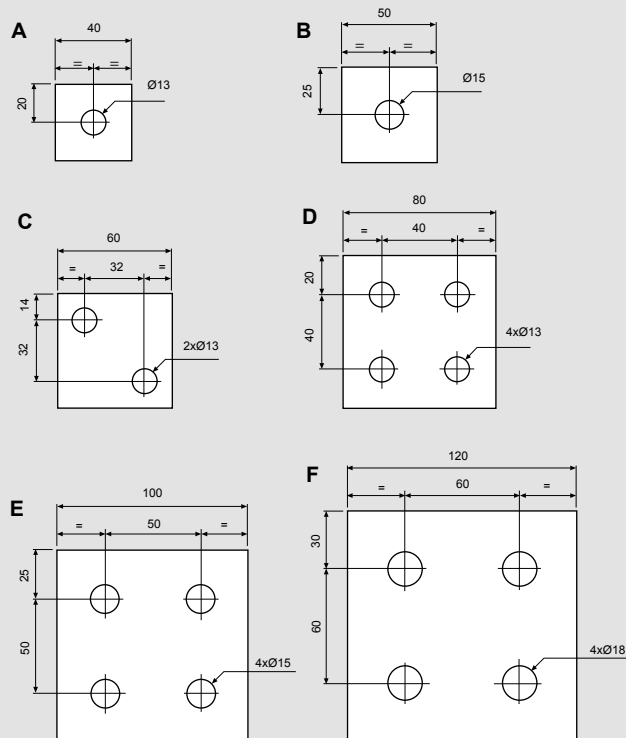

* Resting on the ground and assembled on the transformer.

Boxes can be supplied separately or assembled on the transformer. If you required the box pre-assembled add the "M" suffix to the code (e.g. 231043M).

** The power transformer is corresponds to the type of box and is meant for transformers without surge arresters and without connections to the busbar.

SIZES AND DRILLING OF LV CONNECTION TERMINALS

DRILLING STANDARD

LV connection terminals are manufactured from aluminium. Special CUPAL bimetallic plates can be supplied for the connection of copper cables.
